Hope for the Warriors also offers Clinical Support services. This program can identify and fill gaps in mental health care for post-9/11 combat-injured service members, veterans, and caregivers. A look at all areas of a person's life is made to help

identify parts needing additional support.

Therapeutic Interventions are available when a veteran is not able to obtain or find mental health care treatment within their community or from the VA. The clinical team provides short-term stop-gap supportive services that engage the veteran or family in seeking local treatment.

The scope of services provided under Clinical Support is dependent upon the applicant's state of residence and current licenses held by Hope For The Warriors staff.
